

Automatic Hi-tech Dead weight tester Air

(Balance manométrique automatisée haute performance à air)

✓ Technical specifications

✓ Applications

Range of Dead weight tester is designed to test, adjust and calibrate measuring instruments, mechanical or electronic pressure by comparison (pressure gauges, pressure transmitters or sensors or switches)

They are constituted by a generator of pressure, connected to a compressed source of air, a unity piston/cylinder, of a set of weight identified and of a computer on which is posted : the position of the piston and the value of pressure generated by the dead weight according to the various physical quantities.

The capstan allows to adjust the pressure by compressing the gas through the piston. This pressure is balanced by the set piston/cylinder what allows to compare the instrument to be calibrated in the values of pressures generated by the standard and indicated on the calculator. These dead weight are intended for the calibration in relative pressure.

The Dead weight are robust and easy to use and have a high long-term stability..

- Calibration :	It is necessary to recalculate the pressure generated by the dead weight according to the different variables. Our dead weight are calibrated in the following terms of use : Temperature 20°C - Pressure atmos. 1013.25 hPa - Humidity 50% - acceleration 9.80665 m/s ²
- Fluid :	The system of automatic lubrification integrated into the dead weight avoids the risks of contamination piston/cylinder. Colorless, compatible mineral oil with medical or food uses - volume of the reservoir 20 cm ³
- Source Pressure :	Dry air - gas connection $^{1\!\!/}_{4}$ cylindrical female - This balance needs to be connected to a pressure source.
- Check/adjust the seat :	leveling bubble and adjustable feet
- Connection for the instrument to be tested :	swivel G1/2 standard
- Motorization :	training the weight in rotation by electric engine
- Measure of the temperature :	Precision $\pm 0.1^{\circ}$ C
- Measure of the atmospheric pressure :	Precision ± 1HPa
- Measure of the hygrometry :	Precision ± 10%
- Calculator :	 with dynamic display of the position of the piston with automatic display of the pressure generated by the dead weight according to the temperature, the atmospheric pressure and the hygrometry with a connection for the transfer of the data on computer, allowing a total traceability
- Carter :	Light alloy aluminium AG3 + high-resistance paint
- Ratchet :	removable for transport
- Piston/cylinder :	Single piston treated stainless - Répeatability : 1.10 ⁻⁵ - Sensitivity : 0,5.10 ⁻⁵ - Precision dead weight : 5.10 ⁻⁵
- Weight :	corrosion treated steel - Weight of the set of weights from 33 kg to 48 kg depending on model – Shape masses ergonomic, easy loading of the masses on the bell - Marking corresponding with the measuring unit (bar, mbar, KPa, PSI etc)
